Applications of Computing

Work Experience

Front-End Web Developer | CIBC   Sep. 2019 — Present
Worked among a small team following a scrum agile development process. Assisted in the development of account applications in the Simplii Bank mobile and web application using the Ember JS framework. Utilized the Ember framework to generate dynamic content. Refactored the codebase to increase accessibility throughout the program. Manipulated a Vue JS project templates and styling files in a secondary application used in the Simplii Bank app. Participated in PI planning for the next fiscal year projects.

Content Manager | Canada's Cup   Aug. 2019 — Present
Collaborated with two other team members to ensure that the proper content was displayed to the public. Generated and implemented ways to gain new users to the regatta's website and social medias. Managed various social media pages for the upcoming sailing regatta.

Information Security Coordinator | CIBC   Jan. — Apr. 2019
Worked with Vulnerability Management, Cyber Threat Intelligence and Investigations teams. Adapted and improved a pre-existing Python script used to search for publicly known domains based on a set of key words. Researched and implemented an open source tool for the Cyber Threat Intelligence team. Created a program using Excel VBA to parse XML files to extract relevant and valuable CIBC information for vendor patching for the Vulnerability Management Team. Created a website interface for the Investigations teams to use during malicious software demonstrations.

Software Developer Intern | Distributed ID   May — Aug. 2018
Aided with the ongoing development of a blockchain monitoring system. Implemented a notification system to allow the user to stay up to date on data exchange. Assisted in the creation of a multi-platform app which will allow future customers to understand how the

Relevant Projects

ISANS Game Development
Worked with a small team (4) to build a functional web-interface containing a simplified game-narrative tree. Prototypes were created using Adobe XD. Front-end Development took place using PHP and CSS and Back-end Development utilized MySQL.

Medication Adherence System
Worked among a small team (6) to create an application to ensure patients adhere to their medication schedule. Created using Android Studio. This application has two various users; Patient and Pharmacist.

Content Management System Creation
Created a front-end UI with the ability to add data to a database from user input, display database content and query the database using PHP and PhpMyAdmin.

Learning Management System Prototype
Created an education website, using both low- and high-fidelity application prototypes to cater a variety of use cases and user profiles using Balsamiq and Adobe XD.

Pet Food Automation Prototypes
Created both low- and high-fidelity application prototypes allowing users to automate food dispensed from a remote location using Adobe XD.
